Dr. Robert N. Farvier
Assistant Director
The Clinical Center
National Institutes of Health
Bethesda 14, Maryland

Dear Bob:

Here is another batch of letters which we have just received making various and sundry suggestions for curing the Secretary of State. Would you please look them over and give us your suggestions as to replies.

Sincerely,

[Redacted]
Assistant to the Director

Copy of a telegram from Lady Malcolm Douglas Hamilton,

[Redacted]

Prof. Albert Szent-Gyorgyi, world famous Nobel prize winner and discoverer and isolator of Vitamin C, and head of the Institute for Muscle Research at Woodshole, Massachusetts, has extraordinary cancer cure which is fully effective on animals. Clinical treatments not yet begun but in 22 hopeless human cases has been effective.

I know that Dr. Szent-Gyorgyi has greatest admiration and respect for your brother and would be proud and happy to have this medication used. You realize however that scientists doing basic research cannot offer their services nor have they the right to talk about their results to outsiders, but as the Institute for Muscle Research is supported by the National Institute of Health, I do urge you to approach them.

Approved For Release 2003/04/02 : CIA-RDP80R01731R000200100063-4

Mr. Dulles:

I talked to Lady Hamilton who asked that I convey her very warmest wishes to you and your brother.

She urged very strongly that you bring Dr. Szent-Gyorgi's work to the attention of the Surgeon General and stated positively that his research is financed by the National Institutes of Health which should be cognizant of the fantastic results he has thus far obtained.

MR. DULLES:

STAT

The following telegram was dictated over the phone by
Lady Malcolm Douglas Hamilton, [redacted]
who thought it better not to send it by wire:

Prof. Albert Szent-Gyorgi, world famous Nobel prize winner and discoverer and isolator of Vitamin C, and head of the Institute for Muscle Research at Woodshole, Massachusetts, has extraordinary cancer cure which is fully effective on animals. Clinical treatments not yet begun but in 22 hopeless human cases has been effective.

I know that Dr. Szent-Gyorgi has greatest admiration and respect for your brother and would be proud and happy to have this medication used. You realize however that scientists doing basic research cannot offer their services nor have they the right to talk about their results to outsiders, but as the Institute for Muscle Research is supported by the National Institute of Health, I do urge you to approach them.

Warmest regards

Natalie Hamilton
